

SOC Analyst Triage Report

Example Task reference

Using the triage playbook how to handle this query ?

1. **Context:** Is 03 : 15 AM a normal working hour for your finance team?
2. **Evidence:** What would you check on **VirusTotal** or **AbuseIPDB** regarding that Singapore IP?
3. **Validation:** Since there was **1 successful login** after the failures, does this look like a "False Positive" (user forgot password) or a "True Positive" (hacker got in)?
4. **Severity:** Would you mark this as Low, Medium, or High?
5. **Action:** Would you close the ticket or escalate it to your L2 team immediately?

Detailed TRIAGE LOGS

1. **Context:** At 3:15 AM , the user logged in at a local location for the finance team.
2. **Evidence:**
Internal Logs: Check if this IP runs any other activities.
External intelligence: Scan this IP in VirusTotal;
Check how many security vendors flagged it ,overview of IP address.
3. **Validation:** Even though it is a one time successful login,it is a true positive because the IP address shows a different location and 15 mins prior, it was at a local location.
4. **Severity:** I will mark this as High . Bsecause, the target is a finance administrator.It should get immediate action.
5. **Escalation:** I will escalate to L2 with detailed evidence and attachments, explaining why I am flagging this as urjent.
